Dashcam Azdome M550Pro

Ref: 6973888261532

Azdome M550Pro video recorder

Take care of your safety while on the road. The Azdome M550Pro offers a high-end 4K front camera, a 1080p rear camera and an internal IR camera, and has built-in GPS and G-sensor. It allows loop recording and offers time-lapse mode. It also supports 5G/2.4G Wi-Fi connectivity for fast downloading and sharing of recordings.

Adjustable design, 3 channels of recording

Now you can take comprehensive care of your safety. It includes a front camera whose tilt can be adjusted up to 120° and a rear camera that rotates a full 360°. You also have an internal IR camera at your disposal. So you can easily record every detail from all sides of the vehicle!

Great image quality

The front camera of the M550Pro allows you to record in 4K UHD resolution, and the rear camera - in 1080p FHD. This makes it easy to get high-quality shots and capture even smaller details, such as vehicle license plates. Don't worry about missing something! What's more, the internal IR LED camera allows you to record clear video even at night.

G-sensor

A collision on the road or a bump in the parking lot? With the Azdome M550Pro you will easily get the necessary recordings and the necessary evidence. The video recorder is equipped with a G-sensor, which detects sudden movements of the vehicle and allows you to automatically record a 20-second video starting 5 seconds before the accident.

Loop and time-lapse recording

Have confidence that you won't lose any important video footage. The M550Pro allows you to film in a loop - when the space on the memory card runs out, the device will automatically overwrite the oldest footage. You can also mark the most important clips that should not be deleted. Are you facing a long journey? Turn on Time-lapse mode, which will let the video recorder record at 1FPS and then generate one long video. This way you can record much more!

Safety while parking

The M550Pro video recorder also provides 24-hour monitoring of your car while it is parked. It allows uninterrupted time-lapse recording and automatically detects collisions. This way, even if something happens, you can easily get the necessary evidence, which will come in handy, for example, when claiming compensation. Note: in order to use this feature, an additional wiring kit is required, which must be purchased separately.

Share recordings

With 5G/2.4G Wi-Fi connectivity, the video recorder allows you to quickly download and share recorded footage. The device also has a built-in GPS module, which allows you to record information such as your route or speed, for example. There is also an AZDOME app, with which you can conveniently change settings, edit your videos and share them with friends.

Included

Front camera with IR camera
Rear camera
64 GB memory card
Electrostatic film x4
Car charger
Mini USB cable (3.5 m)
