

Dashcam Azdome M63Lite

Dashcam Azdome M63Lite

Ref: 6973888261808

Azdome M63Lite video recorder

Enjoy greater safety on the road. The Azdome M63Lite video recorder supports high 4K resolution and provides great image quality even at night, and it can record in a loop. It also has a built-in G-Sensor and offers a parking monitoring function (with a separately sold extra cable kit). There's also a dedicated AZDOME app, which allows you to conveniently change settings and download recordings, among other things.

Excellent image quality

Capture every detail while driving. The Azdome M63Lite video recorder allows you to record in 4K UHD, so your videos will be detailed and clear in almost any conditions. The device also performs well at night. The carefully designed lens and WDR support mean you can capture high-quality video regardless of lighting conditions.

More possibilities with the app

Download the dedicated AZDOME app and get more capabilities. Among other things, it provides convenient access to the video recorder's live view, as well as the option to view, download and share recorded videos. The camera connects to your smartphone via Wi-Fi, so you can enjoy fast and reliable transmission.

G-Sensor and loop recording

The video recorder has a built-in G-Sensor, which detects sudden movements of the vehicle and allows it to automatically record short recordings of collisions. This means that if there is an accident, you will easily get the necessary evidence! What's more, the device supports loop recording - once you run out of space on the memory card, the oldest recordings will be overwritten.

Monitoring while parking

Have confidence that your car is safe also in the parking lot. The M63Lite video recorder allows you to monitor your vehicle while it is parked around the clock. If a bump or other accident occurs, the device will automatically record and save a video of the incident - you may need such a clip when you claim compensation. Note: to use this feature, you need to buy an additional wiring kit (not included).

Thoughtful design

The tilt of the video recorder's lens can be freely adjusted up and down. So you can adjust its position to your expectations! What's more, mounting and dismounting the device is extremely easy and does not take too much time. The camera is also equipped with a supercapacitor, thanks to which it works without any problems even in very low (down to -20°C) and high (up to 70°C) temperatures. Its additional advantage is an optional screen saver, which displays the current time.

Included

Video recorder
Car charger
Mini USB charging cable (3.5 m)
Jacking tool
Cable clamp x5
