Catlink Fresh smart odor absorber

Catlink Fresh is a smart odor absorber that effectively eliminates odor through the use of ozone. It offers 3 modes of operation, allowing you to customize its operation according to your needs, and the durable battery provides about 8 days of operation on a single charge. In addition, 2 sensors (infrared and vibration) are responsible for the efficient operation of the device. In turn, the compact design allows you to discreetly place the canister in or next to the litter box, and the quiet operation does not disturb both household members and your pet.

Efficiency in removing odors

The Catlink CL-D-01 Absorber uses ozone technology, which effectively removes, not just masks, unpleasant odors. With this technology, it provides deodorization and disinfection of 98% and 99.7% respectively. In this way, it minimizes the risk of developing diseases and infections, ensuring healthy and clean air.

3 modes of operation

Catlink CL-D-01 offers 3 operating modes - Low, Medium and High - which allow you to adjust the intensity of operation to suit your current needs. In Low mode, the device can operate up to 8 days on a single charge, in Medium mode up to 5.5 days, and in High mode up to 4 days. This gives the user full control over the energy consumption and efficiency of the canister.

Automation and safety of use

The Catlink CL-D-01 odor absorber is equipped with an automatic ozone dispensing system. After 15 seconds of detecting an unpleasant odor by infrared and vibration sensors, the device releases ozone, effectively purifying the air. In addition, to ensure maximum safety, the device stops its operation during charging and when motion is detected, both human and animal, eliminating the risk of accidental ozone release.
