Ref: 6921002651011

Mcdodo MC-5101 Magnetic Power Bank with Stand 10000mAh, 20W (black)

Mcdodo MC-5101 magnetic powerbank with stand 10000mAh 20W (black).

The Mcdodo MC-5101 is a compact 10,000mAh powerbank that offers both wired and wireless charging. It is compatible with multiple charging standards and allows fast charging of phones. In addition, with its built-in stand and advanced overheat protection system, it offers convenience and safety for everyday use. The digital display, on the other hand, will provide you with information about the battery charge level.

Fast, convenient charging

Charge your device the way you like. The powerbank is equipped with 28 strong magnets that ensure stability during inductive charging. With 15/10/7.5/5 watts of power, you will renew the energy of your compatible equipment in a short time. The product also supports wired charging (USB-C), allowing you to charge your iPhone to 60% in about 30 minutes.

Advanced protection

The powerbank is equipped with an advanced NTC temperature sensor that monitors the device's temperature in real time, ensuring optimal charging conditions. What's more, it offers protection against overcharging, short circuit, electromagnetic field overcurrent, etc. This not only increases safety, but also extends the life of both the powerbank itself and the devices being charged.

10,000 mAh capacity

The 10,000 mAh capacity powerbank is ideal for those who need a reliable source of power for the whole day. It can charge your iPhone 13 Mini 2.5 times and your iPhone 14 up to 2 times. This makes the powerbank the perfect companion for travel, business meetings, or everyday use, eliminating the need to carry extra chargers.

Built-in stand

The powerbank was designed with user convenience in mind, which is why it features a retractable stand. Made of durable zinc alloy, it allows the phone to be placed in a stable horizontal or vertical position. Thanks to the precise design, the device is able to hold the phone without the risk of tipping over, which is especially useful when watching movies or making video calls. In addition, the stand can be folded at any time.

Compact size

The powerbank is distinguished by its compact and well-thought-out design, which fits perfectly on the back of the smartphone, without covering the camera lens or interfering with the daily use of the phone. What's more, if you have an Apple or Mcdodo case, you don't need to remove it while charging your device.
