Mcdodo Power Bank MC-6301 20W, 5000mAh to USB-C (black)

Mcdodo MC-6301 20W 5000 mAh powerbank with USB-C connector (black)

Mcdodo MC-6301 is a compact 5000 mAh powerbank designed for users who value convenience and performance. With its fast 20W charging and built-in USB-C connector, the powerbank is perfect for everyday use. Its minimalist design, collapsible stand and extensive security system make it an ideal companion for travel and everyday use, providing fast and safe energy replenishment anywhere.

High capacity and fast charging

The Mcdodo powerbank has a capacity of 5000 mAh, which will allow you to fully charge most smartphone models at least once. Thanks to its 20W fast charging technology, you will charge your Samsung Galaxy S23 up to 55% in just 30 minutes. This is ideal for people who need to replenish their devices quickly, especially in emergency situations or during heavy use.

USB-C connector and port

The built-in USB-C connector makes this powerbank useful for both Android users and newer iPhone models (15 series and above), eliminating the need to carry additional cables. In addition, the USB-C port, which supports an 18-watt input, allows the powerbank itself to charge quickly, enabling a full charge in less than 2 hours.

Foldable stand

A unique feature of this powerbank is the built-in folding stand, which allows you to conveniently use your smartphone while charging. It allows you to place your device in a stable position, for example, for watching videos or making video calls, without having to hold it in your hands.

Compact and portable

The Mcdodo powerbank features compact dimensions, making it easy to carry and fit in a pocket or small bag. Its light weight makes it an ideal travel companion, and the absence of cables makes it even more convenient to use. In addition, the device meets safety standards that allow it to be brought on board an airplane.

Eight levels of security

The powerbank is equipped with an advanced protection system that includes eight levels of protection, including protection against overheating, overvoltage, overcharging, overloading and short circuit. This ensures that your devices are charged safely, even with prolonged use.

LED indicators and additional features

The Mcdodo powerbank is equipped with LED indicators that indicate the level of battery charge, as well as tell you if the fast charging mode is enabled. In addition, the powerbank has a protective cover for the USB-C connector, which prevents dust and other debris from entering the port, prolonging the life of the device.

Included

powerbank
USB-C to USB-C cable (0.2 m)

Manufacturer Mcdodo
