### Azdome M17Pro video recorder

Looking for a reliable video recorder for your car? Opt for the Azdome M17Pro! This high-end camera can record in 1296p and provides great image quality both day and night. It also has a built-in G-Sensor and supports loop filming. It also works with the dedicated AZDOME app, with which you can conveniently change settings, check recorded footage and more.

### Driver assistance

Enjoy an even more enjoyable driving experience. The M17Pro offers advanced ADAS driver assistance, which warns you of potential collisions with objects in front of the vehicle and checks that you are keeping the car within lane limits. This will make every trip more comfortable and safer!

### Try out the AZDOME app

The video recorder connects to your smartphone via Wi-Fi and is made easy to use with the dedicated AZDOME app. Download it to your phone and gain access to additional functions! With its help, you can, for example, conveniently adjust settings, review recorded videos and share them with friends.

### High image quality

Be sure that your driving recordings are clear and detailed. The M17Pro video recorder supports a high resolution of 1296p, so you can easily capture every important detail. What's more, the camera performs well even in low-light conditions and at night. Now you can easily prepare for any circumstances!

#### Loop recording and G-Sensor

Have you run out of space on your memory card? No worries - with the loop recording function, the video recorder will simply overwrite the oldest footage and continue filming uninterrupted. An additional advantage of the device is the built-in G-Sensor, which accurately detects sudden movements of the vehicle. Thanks to it, it is possible to automatically record recordings from events such as bumps and other collisions. So you can easily get the evidence you need!

#### Safety around the clock

Leave your car in the parking lot without worrying about its safety. The M17Pro supports monitoring while parking even around the clock - it can record video at 1 frame per second and automatically save short clips of any collisions. This means that even if something happens, you'll have it on record and gain more options for asserting your rights! Note: this feature requires an additional wiring kit (sold separately).
