Smart toy / play ball for dog / cat Homerunpet TB10-1

Intelligent toy / play ball for dog / cat Homerunpet TB10*1.

If your cat is not provided with enough activity, he will not only get bored and may start to fuss, but he will also run around at night and not let you sleep. So it is worth taking care to provide him with properly engaging entertainment during the day. The Homerun TB10 smart ball will help you with this. It spontaneously moves in random directions and can engage all your cat's senses, stimulating his hunting instincts. The 2 play modes and up to 25 days of operation after battery replacement make it even easier to use.

It will stimulate the cat's instincts

The Homerun TB10 is equipped with a small but incredibly powerful motor. It is also distinguished by a special processor that detects the movement of the device. Thanks to it, the ball automatically changes the direction of rolling at appropriate moments. Its unpredictable action will make your cat have to show real cleverness and commitment to "hunt" it down. Your fluffy hunter will certainly appreciate such a form of activity!

A variety of stimuli

The toy affects various senses of the cat. The built-in laser light engages him visually, and the cord with a bell attached to the ball stimulates his hearing. And that's not all! You can complement the toy on your own with additional DIY accessories, such as feathers or catnip, for example. So many different stimuli are sure to get your pet's attention and encourage him to be active.

Two modes of play to choose from

The ball can operate in 2 modes - normal and smart. When you choose the former, the device will run for 8 minutes. This is perfect play time for your cat. If, on the other hand, you turn on smart mode, a special built-in chip will make the ball turn on when you touch it, and after some time it will automatically turn off. Choose the option that suits you better and provide amazing entertainment for your pets!

Long working time

To power the ball you will successfully use ordinary AAA batteries. They guarantee a surprisingly long working time of the device. Assuming that your cat plays with the ball 2 times a day, it can last up to 25 days after one battery change. That's almost a month of excellent fun for your four-legged friend!

It is not intimidated by cat teeth

The device is designed to stand out for its durability and ease of use. Made of durable PC plastic - it is resistant to falls, wear and tear or bites. Thanks to the injection molding technique, the ball is also waterproof and dustproof. In turn, to turn it on or off, all you have to do is gently press a button.
