Freewell ND8 Filter for DJI Avata 2

Protect your camera lens and enhance the quality of your shots with Freewell's offering. The ND8 filter provides protection against scratches, water, and dust, while effectively reducing the amount of light entering through the lens. The product is made of high-quality optical glass and aluminum alloy. Its lightweight design distinguishes it - you don't have to worry about burdening your device.

Effective Performance

The Freewell ND8 filter ensures effective reduction of reflections, allowing you to easily capture shots characterized by realistic colors and excellent contrast. The product also helps control the camera's exposure settings during outdoor photography and offers 3-stop compensation, allowing you to reduce the amount of light entering through the lens.

Refined Construction

The Freewell product is made of high-quality optical glass and aluminum alloy. It provides protection against water, as well as resistance to dust and scratches.
