

## Latarka Superfire J05, 380+450lm

Latarka Superfire J05, 380+450lm

Ref: 6975515772787

### Superfire J05 Flashlight, 380+450lm

Superfire J05 is a practical multi-function flashlight that is ideal for both everyday use and emergency situations. Equipped with a magnetic base, it can be attached to metal surfaces for convenient illumination of a space. It can also act as a powerbank and renew the energy of low-voltage devices such as a smartphone. In addition, it will serve as a temporary warning light, making it extremely useful for technical work, car repairs or outdoor excursions.

### Compact design

The flashlight is designed for maximum convenience. Equipped with a belt clip and lanyard, it can be attached to clothing or a backpack, making it an ideal travel companion. What's more, the flashlight's light weight and compact size make it easy to transport and store - you can carry it with you at all times.

### Several modes of operation

The Superfire J05 offers yellow light, red light, purple light and strobe. You can also adjust the brightness of the main light in 2 levels. These various options make the flashlight usable in a wide range of situations, from precise tasks requiring a strong beam of light to situations requiring more subtle illumination. Each mode can be easily switched using dedicated buttons, making operation of the flashlight intuitive and convenient.

#### High color rendering index (CRI)

Thanks to its high color reproduction index (CRI  $\geq$  95%) technology, the Superfire J05 flashlight offers exceptional lighting quality, ideal for surface inspection and detecting minor damage. Compared to standard light sources, the high CRI flashlight accurately reproduces the actual colors of illuminated objects, which is invaluable for precision technical work.

#### Bacteria detection and UV illumination

The Superfire J05 is also equipped with a 365 nm UV light, which can be used to detect bacteria and contaminants. This tool will prove useful not only in the technical industry, but also in everyday use, such as for checking surface cleanliness, identifying contaminants or technical diagnostics.

#### USB-C charging and charge indicator

The Superfire J05 flashlight uses a USB-C charging port, ensuring compatibility with most commercially available charging cables. A built-in indicator allows you to monitor the battery level, and LEDs indicate the charge level. A built-in overcharge and over-discharge protection system enhances the safety of use.

#### Safety features and durability

The J05 flashlight is equipped with various safety features to ensure safe use. It offers protection against overcharging, over-discharge, reverse battery connection, power saving and low voltage shutdown. These safety features make the flashlight not only functional, but also safe for long-term use.

#### Included

flashlight  
wrist strap  
USB-C cable  
battery  
user manual
