Superfire A20 Flashlight

The Superfire A20 flashlight combines high power and versatility. It was designed with demanding users in mind. With its practical features and robust design, the A20 flashlight is suitable for a wide range of applications - from everyday use at home and outdoors, to rescue operations, to tactical operations in harsh terrain. Equipped with a powerful light source and intelligent power systems, the Superfire A20 guarantees reliability and excellent visibility even in the most demanding situations.

High brightness and long range

The Superfire A20 flashlight is distinguished by its brightness of 1,700 lumens. Such high luminous power allows for an extremely intense and clear beam of light, which is able to illuminate areas at a distance of up to 300 meters. This makes the flashlight ideal for situations requiring illumination of large areas, such as open-air searches, rescue operations, as well as everyday activities where precise illumination is crucial.

Several modes of operation

The Superfire A20 offers 5 differentiated lighting modes: Low/Medium/Strong/Strobe/SOS. Each mode is designed for different usage scenarios - from signaling help in emergency situations, to blinding a potential attacker, to providing maximum visibility in the dark. The flashlight is also equipped with a memory function that remembers the last used lighting mode.

Various ways to power it

The Superfire A20 flashlight is compatible with several battery types, including 21700, 18650 and three AAA batteries, giving the user great flexibility in choosing a power source. The built-in USB-C charging port allows fast and efficient charging with a variety of devices, such as computers, powerbanks and wall chargers. The LED charging indicator lets the user know the status of the battery - a red light means the battery is charging, while a blue light indicates a full charge.

High durability

The Superfire A20 flashlight is designed for durability and reliability in harsh conditions. It was created from high-quality aluminum, which ensures impact and abrasion resistance. The surface of the flashlight is anodized, which further protects it from corrosion and mechanical damage. This design makes the flashlight resistant to intensive use in demanding field conditions. In addition, it is equipped with a five-layer protection system, which protects against reverse connection, overcharging, low voltage and over-discharge.

Easy to carry

The Superfire A20 flashlight is designed for maximum convenience of use. Its compact size and light weight make the flashlight an ideal everyday companion. The belt clip allows you to securely attach the flashlight to your belt or backpack for quick access to the light source at any time. The wrist strap further enhances comfort, allowing the flashlight to be worn on the wrist or attached to a backpack.
