Yeelight Mesh Downlight M2 Pro - redefine smart lighting

Yeelight Mesh Downlight M2 Pro takes smart lighting to a whole new level. It emits eye-safe light whose brightness and temperature you can adjust at will. The product, thanks to the Yeelight Gateway (sold separately), also allows remote control - by voice or with a smartphone. And if you want even more convenience, connect several devices together and control them all at once! The upgraded Pro version differs from the basic Yeelight Mesh Downlight M2 by a higher power rating of 8 W, a higher luminous flux of 600 lm and larger dimensions, and thanks to its 65° beam angle, it will perfectly illuminate a selected part of the room.

Safe for your eyes

Thanks to the innovative ergonomic design of the Yeelight Mesh Downlight M2 Pro, you can enjoy optimum, eye-safe lighting that won't glare, dazzle or tire your eyes even after prolonged use. The product's electroplated, reflective elements make it fully comfortable regardless of the situation.

It will provide you with the illumination you need

The product gives you the ability to adjust the brightness and color temperature of the light, allowing you to tailor its performance to the current situation. Want a moment to focus when you're working? Turn on the bright, cool light. Want to relax after a tiring day? Warm, soft lighting will work perfectly. Care to display your collection of paintings, sculptures or other unique items? Adjust the light to make

them look their best.

Enjoy remote control wherever you are

You can remotely control the Yeelight Mesh Downlight M2 Pro from anywhere - including away from home. Pair your devices with the Yeelight app to set detailed schedules for their operation, conveniently turn the light on or off, and adjust its brightness or color temperature. The product is also compatible with Google Assistant, Apple HomeKit, Amazon Alexa and Samsung SmartThings. Connect it to the system of your choice and manage your lighting by voice or with the help of your smartphone!

Control multiple devices simultaneously

With advanced Bluetooth Mesh technology, you can connect multiple devices together and control them all at the same time. You no longer need to turn on each bulb separately. Just start one of them and adjust its parameters - the others will immediately adjust to it. This is an excellent time-saver!

The perfect complement to the arrangement of your apartment

The device is distinguished by an extremely practical, universal design - when you install it in the desired place, it remains almost invisible. This makes it ideal for any room - not only will it not disturb the interior design, but also emphasize its beauty with the appropriate lighting.

Yeelight lighting fixtures comparison

The available Yeelight Mesh Spotlight M2, Downlight M2 and Downlight M2 Pro light fixtures are very similar in design and performance, but differ in several details that are worth knowing. These include light distribution angle, dimensions, brightness and power rating. Check out the individual parameters in the table below:
