Yeelight W3 smart bulb (dimmable)

Compared to previous models, the Yeelight W3 smart bulb (dimmable) is smaller and generates brighter light while consuming less power - in standby mode, its power consumption is only about 0.3W. It will provide you with warm, pleasant lighting. It is compatible with Google Assistant and other smart home management platforms. You can also adjust the brightness of the light it emits. Thanks to the use of new technologies and improved solutions, the bulb has a wide range of possibilities known from the 1S model, offering an even more attractive price.

Adapt lighting to the situation

Yeelight W3 generates an eye-friendly, warm light with a color temperature of 2700K. However, this is not the end of the advantages of this unique bulb. By choosing to use it, you gain the ability to adjust the brightness of light. Adjust it to your needs or time of day. Bright light is ideal for work or study. If you want to relax or calm down before going to bed, you can dim it a bit.

Fabulous ease of use

Install the Yeelight app to quickly and easily set up your W3 bulbs. With built-in Wi-Fi, the installation process is fabulously simple. You also don't need any additional hubs or drivers. The app also allows you to conveniently control your lights remotely. Turn your W3 on and off, adjust light brightness and create schedules - Yeelight gives you the freedom you dream of.

Even more remote control options

The W3 (dimnable) bulb is compatible with a number of smart home management systems. You can pair it with Google Assistant, Amazon Alexa, IFTTT or Samsung SmartThings, among others. This also makes it possible to control the bulb with simple voice commands. You no longer even have to get up from your chair or couch to turn on the light - just say a few words!

Control multiple bulbs simultaneously

Yeelight smart bulbs can also be controlled in groups. If you decide to use more of these devices in your home, you will definitely appreciate this solution. Add all W3 to the app, create a group and enjoy convenient control. Just turn on one bulb and adjust its parameters - the others will immediately follow!

Say goodbye to high electricity bills

W3 is energy efficient and environmentally friendly. Optimal electronic solutions used in the production process of the bulb made it so that in standby mode its power consumption does not exceed 0.5W. Thus, using the new Yeelight devices will save not only electricity, but also money - forget about too high bills!
