Darkflash DF2100 Computer case (black)

Darkflash DF2100 computer case (black)

Darkflash DF2100 is a sleek computer case that features a transparent side panel made of tempered glass, which gives the user the opportunity to admire the internal components such as the included glowing ARGB fans. A well-thought-out layout of holes and mounts allows the user to plan the interior space in a variety of ways to make the arrangement best suit their needs. The spacious interior will accommodate up to 11 fans, while the stylish front panel with double mesh and vents will ensure very good airflow. Horizontal installation of the graphics card prevents it from bending when it is too long.

Horizontal VGA/graphic card positioning

The Darkflash DF2100 case takes care of the safety and performance of the user's hardware. The horizontal installation of the graphics card not only optimizes the internal appearance, but most importantly counteracts its deflection, especially when it is too long. This keeps the hardware protected and intact.

Spaciousness and configuration flexibility

With the Darkflash DF2100, space is key. The large main compartment allows room for as many as 11 fans, allowing users to create the perfect cooling system for their system. The interior of the chassis is designed so that users can easily organize it to suit their individual needs.

#### Cooling - maximum performance

The cooling in the DF2100 chassis is well thought out. The ability to install up to 260mm of cooling on the top and front panels (noting that the right and front fans cannot be installed at the same time) ensures excellent heat dissipation, which guarantees long and stable operation of components.

#### Fast USB3.0

Nowadays, high-speed ports are the key to efficient work. The USB3.0 port of the Darkflash DF2100 chassis offers users not only lightning-fast data transfer speeds, but also efficient charging of their devices. This makes work, entertainment or backup even faster and easier for him.

#### Elegance combined with functionality

The design of the DF2100 case is a combination of aesthetics and functionality that any user is sure to appreciate. The elegant front panel made of ABS and the transparent side panel made of tempered glass not only emphasize the unique character of the set, but also promote excellent heat dissipation. This is a guarantee that the user's equipment will not only look great, but, most importantly, will work efficiently and trouble-free.

#### Included

Housing
