

## Video Doorbell Botslab R811 5MP

Video Doorbell Botslab R811 5MP

Ref: 6974772422664

### Botslab R811 5MP video intercom

The Botslab R811 video intercom is the latest development in home security. It features a 180° wide-angle lens with 5MP resolution that provides clear images, both day and night. With HDR and motion detection, you can be sure that nothing will escape your attention. The ability to change your voice when communicating with people outside the door further enhances the privacy of the home. A dedicated app provides insight into the camera's video and allows you to customize your devices. The device is also compatible with voice assistants.

### Large field of view and high resolution

The field of view is 180°, so you'll enjoy full control over what's happening in front of your home. The 5MP resolution provides clear and detailed images that allow you to easily identify the people in front of your door. The HDR function further enhances the recording quality by adjusting brightness and contrast in adverse lighting conditions.

### Advanced detection features and view modes

The Botslab R811 offers motion detection and person recognition functions. This enables the video intercom to distinguish between people and other moving objects, such as animals or vehicles, minimizing false alarms. The device also offers a variety of view modes, including widescreen and VR, allowing you to customize your viewing experience.

#### Voice modulation

The Botslab R811 video intercom provides an extra level of security with its voice modulation feature. You can choose from Normal, Male and Funny modes, allowing you to maintain privacy when talking to strangers. The solution used increases the sense of security in the home.

#### Reliable in any situation

Thanks to its IP66 waterproof rating, the Botslab R811 video intercom is resistant to demanding weather conditions. Temperatures ranging from -20 to 60°C do not affect its performance. You can power the device using the built-in 6400 mAh battery or wired.

#### Additional amenities

The Botslab R811 is compatible with Alexa and Google Assistant voice assistants, allowing you to control the device using voice commands. With 2.4GHz and 5GHz Wi-Fi support, connection to the network is stable and reliable. Built-in memory of 32GB allows you to store video history for 365 days.

#### Easy installation

Installation of the Botslab R811 video intercom will not cause you any difficulties. The device can be mounted either with glue or on the wall with 15° adjustable screws.
