

Smart adapter, USB ZigBee switch SONOFF ZBMicro (max 36W)

Ref: 6920075741964

Smart adapter, USB ZigBee switch SONOFF ZBMicro (max 36W)

Smart adapter, USB ZigBee switch SONOFF ZBMicro (max 36W).

SONOFF ZBMicro is a state-of-the-art Zigbee USB adapter that allows you to fully automate and remotely control USB devices in your smart home. With app integration, you can set schedules, create smart scenes and use voice control capabilities. The product also allows you to charge your devices and works perfectly as a Zigbee signal booster. Note: the adapter requires a Zigbee hub (not included) for proper operation.

Fast charging of up to 36 watts

ZBMicro supports fast charging with up to 36 watts of power using compatible adapters. This will have your devices ready to go in no time! In addition, the ability to set schedules avoids overcharging, protecting your equipment's batteries and increasing their lifespan. Note: the product itself does not support fast charging - an additional adapter is required.

Efficient data transmission thanks to USB 2.0

Thanks to the Hi-Speed USB 2.0, the SONOFF ZBMicro adapter significantly improves data transfer efficiency. This is especially useful when working with devices that require high transmission speeds. Now you can transfer all the necessary files in no time!

Smart control

With the help of the adapter you can easily turn your ordinary USB devices into smart equipment! When you plug them in, you gain the ability to control them with apps and set timers. You can also control them using voice commands! It is also possible to connect them with other devices and create complex automations. Make it so that when the temperature in the room rises, the fan will spontaneously start, and when you enter the bathroom the light will immediately turn on. The adapter is compatible with Amazon Alexa, Google Home, Alice, IFTTT and SmartThings.

Wide compatibility

ZBMicro works with Zigbee hubs that support Zigbee 3.0, such as SONOFF iHost, NSPanel Pro, ZB Bridge Pro, as well as Echo Plus 2nd, Echo 4th Gen, Echo Show 2nd, Philips Hue, Aeotec Smart Home Hub V3 and SmartThings hub V3. It is also compatible with open automation platforms such as Home Assistant, Zigbee2MQTT and openHAB, enabling full personalization of home automation.

Advanced signal boosting with Turbo mode

The adapter also acts as a Zigbee router, providing a stable and reliable connection throughout the home. This is made possible by advanced Turbo Mode technology, which increases range and signal strength. Forget about transmission problems! It's ideal for places with a large number of Zigbee devices, where connection stability is very important.

Durable and easy to configure

The ZBMicro is made of durable, damage-resistant materials. As a result, it is very durable - even falls and bumps will not frighten it. It will serve you perfectly for a long time! Configuration of the adapter will also not cause you any problems. Just download the eWeLink app and follow a few simple steps.
