Wireless earphones TWS EarFun Air Pro 4, ANC (black)

TWS EarFun Air Pro 4 headphones, ANC (black)

Meet the EarFun Air Pro 4 - TWS wireless headphones that combine superior sound quality, advanced technology and stylish design. They offer amazing sound in Hi-Res Audio quality. The combination of Qualcomm QC3091 chipset with Snapdragon Sound and aptX Lossless codec guarantees unparalleled clarity and depth of sound, allowing you to enjoy every musical detail with studio-quality precision. With intelligent ANC noise cancellation, low-latency gaming mode, multiple Bluetooth connection modes and long runtime, these headphones are ideal for anyone who doesn't want to compromise on sound quality and comfort.

Unparalleled sound quality

With 10-millimeter dynamic drivers, the EarFun Air Pro 4 deliver powerful bass and clear treble and midrange. Supported by Hi-Res Audio, the headphones deliver unparalleled clarity and depth of sound, reproducing every detail of your favorite music with unparalleled precision.

Listen to the sounds of your favorite music

With EarFun Air Pro 4, you can enjoy your music in the highest possible quality lossless Bluetooth transmission. The LDAC codec allows for three times more data transfer than standard Bluetooth codecs, providing high-resolution sound close to studio quality. The aptX Lossless, on the other hand, maintains excellent audio clarity, ensuring that every detail can be heard as in the original recording.

#### Innovative ANC technology

EarFun Air Pro 4 use ANC (active noise cancellation) technology, which will provide ideal sound isolation of up to 50 dB. The technology used intelligently adjusts to the environment, analyzing external noise levels in real time to ensure the most effective suppression of unwanted sounds. The headphones offer four noise cancellation modes - High Noise Cancellation, Low Noise Cancellation, Ambient Sound to stay connected to your surroundings and Wind Reduction - invaluable for phone calls or listening to music outside on windy days.

#### Stay in touch with loved ones

No matter where you are, now you can freely make phone calls, confident that your loved ones will hear everything you have to say to them! The headphones have 6 built-in microphones that use an intelligent algorithm along with Qualcomm cVc 8.0 technology. This combination provides superior ambient noise reduction and voice quality enhancement, ensuring that your calls are crystal clear, even in noisy or windy conditions.

#### More time to listen to music

Forget about interruptions while playing your favorite playlists! With ANC enabled, the headphones provide up to 7.5 hours of use, and the included charging case will extend their runtime by an additional 27.5 hours. With ANC off, you can listen to music for up to 52 hours using the case! What's more, after just 10 minutes of charging, the Air Pro 4 can accompany you for another 2 hours.

#### Bluetooth 5.4 - stable and reliable connection

EarFun Air Pro 4 use the latest version of Bluetooth 5.4, which ensures a reliable and fast connection. With the ability to connect to 2 devices simultaneously, you can easily switch between your phone and laptop without having to pair again. Google Fast Pair makes pairing with Android devices a snap, and AURACAST technology allows you to share audio from one device to multiple pairs of headphones or speakers.

#### For gaming enthusiasts

The EarFun Air Pro 4 headphones offer a dedicated gaming mode that reduces latency to as little as 50ms, ensuring audio and video synchronization at the highest level. This is crucial for gamers who need instant audio response to in-game actions. In addition, the headphones support Snapdragon Sound technology, which guarantees exceptional high-definition sound quality while gaming or listening to music.

#### With your comfort in mind

EarFun Air Pro 4 are equipped with smart sensors that automatically stop music playback as soon as you remove the headphones from your ears. This way you'll never miss your favorite track! The headphones are supported by the EarFun Audio app, which expands your personalization and control over the device. The app allows you to select headphone modes, check the charge status of the headphones and the case, and use the equalizer.
