

## Wideorejestrator Botslab V9H

Wideorejestrator Botslab V9H

Ref: 6974772423890

### Botslab V9H video recorder

The Botslab V9H is a 2-in-1 device that combines the functionality of a car camera and an action cam. With 4K recording, dual screen, image stabilization and intuitive voice control, the product offers exceptional image quality and ease of use both on and off the road. Its modular, compact design, harsh weather resistance and long operating time make it an ideal choice for drivers and outdoor adventure enthusiasts alike.

### Recording in 4K

The Botslab V9H video recorder captures video in 4K resolution for detailed recordings. With its 5-layer Ultra-HD lens, f/1.8 aperture and 1/2.7" sensor, the camera performs well in a variety of lighting conditions. The WDR (Wide Dynamic Range) function allows the camera to capture images in contrasting scenes, such as when there is a large difference between bright and dark areas. As a result, the V9H is reliable both during everyday driving and when recording extreme sports.

### Multiple recording options

The V9H allows you to quickly switch between Dash Cam and Action Cam modes. In the first, the video recorder records both events on the road and the interior of the vehicle, providing a full record of your trip. In the second mode, the device allows you to capture dynamic shots. Using electronic image stabilization (EIS), each recording is smooth and noise-free. Various recording modes are available,

including Slow Motion, which is suitable for capturing dynamic moments with even greater precision. The dual 1.54-inch display allows convenient switching between Selfie and Scenic Shot modes.

#### Capture every moment

Thanks to its Pre-Recording function, the Botslab V9H allows you to record up to 10 seconds of footage before the actual recording begins. The solution used ensures that no important moment is missed, regardless of whether the camera is in video recorder or action camera mode.

#### Seamless voice control

Voice control on the V9H allows convenient operation without having to manually fiddle with the camera. You can issue commands, such as starting recording, taking a photo or marking a recording, giving you complete freedom and comfort, whether you're driving or engaged in sports activities.

#### Long runtime and durable design

The powerful 1700 mAh battery allows recording for up to 2.5 hours on a single charge. The fast-charging function allows it to reach 80% charge in just 30 minutes. The video recorder is rain- and splash-proof, so you can use it while hiking, trekking or biking in the rain.

#### Emergency recording and parking monitoring

The Auto-Lock Crash Recordings function ensures that critical video footage is protected from being overwritten. A parking monitoring mode is also available, which provides 24/7 surveillance of the vehicle by recording any movement around the car. It also offers time-lapse recording, which is especially useful during longer stops. Note: to take advantage of the 24/7 parking surveillance function, you will need to purchase additional wiring, available for purchase separately.

#### Extended memory and loop recording

The device supports microSD cards of up to 256 GB, providing plenty of space for long recording sessions. In addition, the Seamless Loop Recording function automatically overwrites the oldest recordings, eliminating the need to manually manage memory card space.

#### Included:

Camera  
Car mount  
USB-C power cable  
Car charger  
Static stickers x2  
3M tape  
User manual  
Mounting lever  
Battery compartment  
USB power cable

Manufacturer: Botslab  
Model: V9H  
Resolution: 4K  
ADAS: None  
Viewing angle (FOV): 170°  
Aperture: f/1.8  
Display size: 1.54 inches  
Power supply: Rechargeable battery / 5V/2.4A car charger  
Wi-Fi: 2.4 GHz  
Port: USB-C  
Memory: Local memory  
G-sensor: Yes  
Battery capacity: 1700 mAh  
GPS: None  
Application: Botslab
