

## Electric Hot Water Cup Deerma DR050

Electric Hot Water Cup Deerma DR050

Ref: 6955578037542

### Deerma DR050 Electric Hot Water Cup

Deerma DR050 is a versatile device that can act as a portable kettle and thermos. It allows you not only to boil water, but also to maintain its temperature thanks to the thermos function. The product ensures the safety of use and is made of high-quality materials such as 304 stainless steel. Its capacity is 350 ml. The thermos cap will also work well as a mug. The device is light and handy enough to accompany you almost anywhere - at home, at work or while traveling.

### Your indispensable companion

Provide yourself with the ability to prepare aromatic coffee, hot tea or instant soup wherever you go. The DR050 kettle is extremely lightweight and portable - you can easily fit it in your bag or backpack. It will not be too much of a burden. What's more, its power consumption is only about 300W. So you can easily use it also in places with limited power consumption, such as dormitories or hotels.

### Will boil water and keep it warm

When you unplug it from the power supply, the drink inside will remain warm for some more time, as it does in a normal thermos. This is made possible by the 3-layer thermal insulation. The device has also been equipped with a special safety valve and 3 vents to ensure even evaporation. This makes it even safer to use.

#### Comfort of use

The thermos is designed to provide you with maximum comfort. Its simple operation is made possible by a single button. The non-slip silicone pad allows you to stand the device steadily on the chosen surface, and the detachable cable makes it easy to transport and store. You don't have to be afraid that the thermos will leak - a special seal prevents that. The lid of the product can be used as a mug - so you do not have to burden your bag or backpack.

#### In the interest of safety

Don't be afraid of getting burned. The thermos is equipped with 3-layer thermal insulation, thanks to which its surface does not heat up excessively. The interior of the device is made of 304 stainless steel, which is safe to use in contact with food. Moreover, the technology used minimizes the risk of bacteria multiplication. The product is also protected against overheating, among other things.
