Joystick PXN-2113 PRO Flight control

Ref: 6948052901026

PXN-2113 PRO Flight control joystick

The PXN-2113 PRO is a realistic joystick for aviation and war games that will bring your gameplay to a whole new level. Feel like you're at the controls of an airplane with the realistic vibration system and incredible precision. The device is compatible with Windows XP, 7, 8 and 10.

High functionality

What makes the PXN-2113 PRO so good at reproducing the feeling of flight? The stick has been designed to replicate the functionality of real-world counterparts. It has an omnidirectional Hat Switch, 12 programmable buttons, a continuous fire trigger and a throttle.

Built for aviation and war games

Do you spend long hours in games like War Thunder, Flight Simulator, World of Tanks or World of Warplanes? With this joystick you will enter a new level of immersion of your favorite productions. You have it at your fingertips!

More realism

The PXN-2113 PRO is equipped with a vibration motor that enhances the realism of the battlefield experience. What's more, the precision and use of the continuous fire trigger will further enhance gameplay satisfaction and let you get into the skin of a pilot like never before.
