Cordless Screwdriver HOTO QWLS001 3.6V (blue)

Ref: 6974370800246

The HOTO brand is part of the Xiaomi ecosystem.

Cordless Screwdriver HOTO QWLS001

Looking for a handy screwdriver that will make your work easier? Equip yourself with the HOTO QWLS001 cordless precision screwdriver, which enables you to screw in and remove screws efficiently and is perfect for beginners. The powerful motor works at up to 220 rpm and the screwdriver offers adjustable torque. Fully charged, it can screw in up to 1000 screws and comes with 12 bits made of S2 steel.

User-friendly

The HOTO QWLS001 cordless precision screwdriver is made of durable plastic and TPE rubber. So it is extremely durable and resistant to damage, but it also provides high user comfort. Thanks to its low weight of 250 g, the screwdriver does not cause any discomfort during work, and 2 practical buttons guarantee convenient operation. One of them allows you to insert the screw, while the other enables you to unscrew it.

Powerful work

The powerful motor delivers up to 4 N·m of torque and high speed. The advantage of the model is also a durable battery with a capacity of 1500 mAh, which guarantees long working time. If you charge the device to full, it will enable you to drive up to 1,000 screws! The built-in USB-C port allows you to conveniently renew the power.

Adjustable torque

With a smart chip and a special dial, you can customize the QWLSD001's operation and adjust the torque of the device. Level one will be suitable when repairing a speaker or computer, level two allows you to screw down a shelf, and level three will work well for DIY. If necessary, you can also turn off the device completely - the Safety Lock mode will prevent accidental starting.

12 bits included

The included bits are made of high-quality S2 steel and have a hardness of 60 HRC. An additional layer of environmentally friendly nickel increases their resistance to rust, making the bits surprisingly durable and serving you for a long time. The holes in the base of the device allow you to store all the bits, so you don't have to worry about losing them.

Additional features

The screwdriver has a practical LED backlight which is useful when working in a dark room. The backlight does not cast a shadow and turns off after 10 seconds from releasing the button. Another noteworthy feature is the built-in advanced circuit, which detects whether a screw is already unscrewed and automatically stops rotation. This protects the screws from damage and prevents injury to the user.

Included:

Precision screwdriver

12x bits C6.3x50 mm (SL4 flat, Phillips PH1 / PH2 / PH3, Allen H3 / H4 / H5 / H6, Torx T15 / T20 / T25, Pozidriv PZ2)
