SMART Face Mask AirPOP Active (Black/Yellow)

AirPop masks are proven to protect you from the outside air and help take care of your health. They redefine the relationship we have with our urban atmosphere. They feature the most advanced ergonomic design and are made of breathable materials, so they provide full comfort and are perfect for everyday use. Our health is exposed to three types of airborne hazards: ecological (allergens, forest fires, dust storms), anthropological (coal burning, dust pollution) and biological (viral epidemics, bacterial diseases). AirPop will protect you from all of them! Climate change, a growing global population and economic activity are all factors that translate into an increase in the incidence of diseases associated with all types of hazards. That's why it's so important to protect your health. AirPop provides unparalleled protection, regardless of the type of risk. What's more, the mask is equipped with a Halo Sensor.

Thoughtful design

The most technically advanced material ever developed for masks. A combination of knitting and compression molding technology has created high airflow zones, resulting in the lightest and most breathable mask for you. Everyday chores, sports or fun - you can feel safe and comfortable in the AirPop mask. Designed to move with you. The 3D aerodome shape is molded with innovative, moisture-wicking fibers. The excellent weight-to-comfort ratio works especially well for intense activity. If you value freedom and an active lifestyle, the AirPop mask will fit your tastes perfectly.

Halo Sensor

The SMART AirPop Active product is distinguished by the presence of a special sensor that allows you to connect the mask to your phone. The sensor is compatible with iOS and Android. This technology provides easy access to relevant information, such as the quality of the air you are inhaling at any given time. The mask is powered by a battery that you can easily remove. If you don't want to use the SMART function - you can also easily remove the module.

Inner strength

The real advantage is what's inside - the patented 360-degree AirPop adaptive seal and flexible frame design ensure a perfect fit that is not only correct, but will delight you with wearing comfort in any situation. The unique design allows for the right shape to keep the filter away from your face, increasing airflow. The soft-touch seal gently adapts to your face - as you speak, smile and move. It's so lightweight you'll forget you're wearing it.

Replaceable filter cartridges

The two-layer electrostatic melt-blown nonwoven filters feature high filtration efficiency and protect against even the finest contaminants. The pre-filter layer is sandwiched between two protective top layers, effectively trapping harmful airborne particles. The filter blocks as much as >97%
