

Robot vacuum cleaner robot Roidmi EVA 2023

Robot vacuum cleaner robot Roidmi EVA

Ref: 6970019148977

Roidmi EVA 2023 cleaning robot

The Roidmi EVA 2023 cleaning robot will take care of tidiness while you relax after a hard day. The device vacuums, sweeps and mops, what's more, it returns to the base by itself, where it automatically empties the dust tank and cleans the mop pads. With a suction pressure of 3200 Pa, the device picks up all the dirt, while the mop pads work at 180 rpm and 12 N pressure, effectively cleaning even the most stubborn stains. The capacious bag collects dust for up to 75 days, and additional filters prevent dirt from entering the water pump. Convenient operation is enabled by a dedicated app and Google Assistant compatibility.

Vacuums, sweeps, mops

Bet on one device that allows you to vacuum, sweep and mop efficiently. The Roidmi EVA 2023 uses 3,200 Pa of suction pressure to pick up dust, crumbs and other debris from floor surfaces and narrow crevices. The device also has mopping pads that work at 180 rpm and 12 N pressure and allow it to get rid of even stubborn, dried stains. The cleaning robot works extremely quietly - its volume level does not exceed 77 dB, so you can enjoy a clean home without disturbing the domestic peace.

Intelligent floor cleaning

Improved mopping pads made of thick terry cloth fit perfectly to the floor, effectively removing even tough dirt - compared to the previous model, the pads are able to clean up to 10% more surfaces! They are anti-bacterial and mold-resistant, and when they detect

the carpet, they automatically lift up to prevent wetting. What's more, the pads can move in two directions, reducing interference with the caster wheels. Also noteworthy is the large water container that separates clean and dirty water, keeping the mopped surface spotlessly clean.

No contact with dirt

You no longer need to clean the mop pads yourself - the emptying station will do it for you. The station automatically effectively cleans the pads and then dries them with hot air, so they will always be ready for use. To ensure the safety of household members, the station also features child protection, which eliminates the potential risk of accidental start-up or contact with cleaned items. In addition, it is equipped with a special ramp for the cleaning robot, which you can remove at any time.

Capacious dust bag

The Roidmi EVA 2023 cleaning robot not only mops, but also effectively collects dust, small debris, hair or hair. The 3 L bag in the station allows it to collect waste for up to 75 days, so you don't have to replace it too often. With its antibacterial formula, the bag kills 99.9% of bacteria and leaves no odor. The robot itself has a 220 ml dust tank.

Practical display

The device is equipped with a color LED display that will give you quick and convenient access to information about the robot's operation. A flashing indicator will let you know if the dust bag is full, the dirty water tank is full or the clean water tank is empty. You will also check the battery charge status on the screen, among other things.

Simple operation

Control the robot without moving from the couch. The device is compatible with Google Assistant, so simple voice commands are all you need to start the device, stop its operation or direct it to the docking station. There is also a dedicated Roidmi app at your disposal, which allows you to, among other things, create work schedules, set forbidden zones or adjust the cleaning mode for each room.

Overcomes all obstacles

With its AI-LDS 6.0 intelligent obstacle avoidance system, the Roidmi EVA 2023 cleaning robot automatically detects obstacles that are in its path, so it can effectively avoid them and avoid collisions with other objects. The EVA 2023 also uses an LDS laser, which helps prevent it from getting stuck under beds, closets and other low spaces. The robot will also easily negotiate thresholds and other obstacles up to 20 mm high, and will perfectly clean areas along walls. OTA updates are also a plus.

Powerful battery

The EVA 2023 is equipped with a powerful 5200 mAh battery, so it provides a long operating time - it can run for up to 74 - 228 minutes on a single charge, which will allow it to clean a large area without any trouble. It will take about 250 minutes to renew its energy, and after that time you can enjoy its capabilities again.

Included

Cleaning robot with 2 mopping pads

Automatic emptying station x1

Dust bag x5

Cleaning brush x1

Mopping pads x2

Side brush x1

Filter x1

Power cord x1
