DDPAI Z50 dash camera

Keep yourself safe while traveling and equip yourself with the DDPAI Z50 dash camera. The device records videos in 4K resolution, and D2save technology allows you to save recordings to NAND flash memory in case of TF card failure. The product uses ADAS technology and a special parking mode that will take care of your car's safety 24 hours a day (you'll need to purchase a hardwire kit power adapter for this).

Impressive image quality

The DDPAI Z50 dash camera provides high image quality. The Z50 uses a SONY IMX415 sensor and records images in 4K quality, ensuring excellent sharpness even in difficult lighting conditions. What's more, state-of-the-art Realcube imaging technology combined with advanced algorithms translates into rich detail and natural, vivid colors.

Secure storage of recordings

The use of D2save technology guarantees the safety of recorded material regardless of the situation. How it works. In the event of a TF card failure, the recordings will be stored in additional NAND flash memory, and then transferred back to the TF card as soon as the

opportunity arises. This is an excellent way to prevent the loss of important footage. The Z50 supports TF cards of up to 128 GB and allows loop recording.

Professional capacitor

The device is equipped with a high-end capacitor, which, replacing the classic battery, increases the safety of use. Thanks to it, the dash camera can operate at temperatures from -15°C to 70°C. What's more, the capacitor allows recording for the last 3-4 seconds, even when the camera is turned off. So you are assured that you will not miss anything important.

Take care of your car

The Z50 also offers a parking mode that will guarantee the safety of your car for up to 24 hours a day. When the vehicle is parked, the camera records in timelapse mode to then play back the video with the usual frame rate. If there is a risk of a collision while parking, the Z50 will notify you immediately! To use the parking mode, purchase the IPS smart power adapter (hardwire kit), which constantly charges the camera, allows uninterrupted monitoring and protects the vehicle's battery from running out.

DDPAI app

Want more? Just install the free DDPAI app, which gives you access to a functional video editor. With its help you can easily and conveniently edit your videos, enriching them with special effects, filters or music. You can also watch your friends' recordings and share your footage with them. The built-in Wi-Fi module is also a plus - it allows you to download and watch videos almost at any time.

Included
