

### Headlight with non-contact switch Superfire X30, 340lm, USB

Ref: 6956362903227

Headlight with non-contact switch Superfire X30, 500lm, USB

#### Outdoor flashlight

The Supfire X30 is a compact headlamp that you can take anywhere with you. It will fit in your pocket, backpack, handbag or even a sachet. The headband allows you to put the flashlight on your head and use it when you need both hands free. In addition, thanks to the ability to adjust the position of the flashlight within 45 degrees, we can adjust the angle of incidence of light to our own needs.

#### Non-contact switch

The flashlight is equipped with a non-contact switch that allows you to turn on the flashlight by waving your hand in front of the flashlight. This function is especially useful when you have dirty hands or dirty gloves that make it very difficult to press the switch.

#### Fast charging

The flashlight is powered by one 1200 mAh battery. The battery can be quickly recharged using the micro USB port. You do not need a special charger to charge the flashlight - just plug the micro USB cable into a power bank, charger or computer. During charging, the red light will indicate that the battery is charging, and when the battery is charged, the light will turn green

#### Strong light

The USA Cree XPG LED provides powerful light and has a long life span. An additional COB panel provides light with a wide angle of light,

perfectly illuminating the nearest area, also allowing to switch on the red light, useful in difficult conditions or emergency situations. The light has a brightness of 340 lumens and its range is 130 meters. The flashlight has 5 modes of illumination. 3 modes are used to control the brightness (strong, medium, weak) and the last two to turn on the red light. The flashlight switch is used to switch between modes.

#### Attributes of Supfire X30

The advanced design, the ability to set the working angle, and the combination of red and white distinguishes X30 from other outdoor flashlights.
