Functional 5-in-1 photographic blender

A photographic blender is an essential tool for every professional photographer, as well as amateur photographers who appreciate great quality photographs. The blender is used to reflect and modify the colour of the reflected light. It fills in shadows and reduces contrasts that are too strong.

Adjust to your needs

With a durable and flexible frame , it provides easy unfolding and folding. The blender comes in five colours for different purposes:-Transparent is for softer lighting without shadows. It is suitable for dual use both indoors and outdoors.-Gold creates a sunset effect that produces warm and soft skin tones, suitable for portraiture.-Silver is used to enhance light in low-light conditions.-White produces soft, clean light.-Black creates shadow and is ideal for creating a dark and mysterious mood.
