TWS HHOGene GPods RGB Headphones (black)

Opt for a successful combination of high-quality sound and unique style. The HHOGene GPods are one-of-a-kind headphones that feature customizable, dynamic RGB backlighting - easily customize them to your liking and give them a unique touch! Enjoy fantastic sound thanks to 10-millimeter drivers and cut off the noise with ANC active noise cancellation. Also noteworthy is the battery life of up to 5 hours and Bluetooth 5.2 connectivity.

Unique style - up to 300,000 colors

Watch the light dance to the beat of your favorite songs. GPods are equipped with dynamic backlighting, the brightness and color of which you can customize to your liking using a dedicated app. Several interesting themes are available, and there's also an option to capture a selected hue from the environment. You also have a color wheel at your disposal. Choose the best settings for you, turn on your favorite playlist and enjoy the dynamic effects! You can also change the headphone cases for even more interesting visual effects (additional cases are available for purchase separately).

Delightful sound

With GPods you will rediscover the magic of music. The headphones are equipped with dynamic 10mm drivers and support AAC and SBC audio codecs. What's more, they've been tuned to deliver natural, richly detailed, perfectly balanced sound. Deep, warm bass,

ear-pleasing mids and clear, crisp treble - all will make your favorite songs sound better than ever before!

#### ANC noise reduction

Tired of annoying noise? Are you annoyed by the loud conversations of your fellow passengers on the train or bus? GPods will let you forget about unnecessary noises and focus on your favorite songs or podcasts! The headphones support ANC active noise cancellation technology, so they can drown out unwanted background noise by up to 25dB. Now all that matters is you and your music!

#### Bluetooth 5.2

Connection problems are a thing of the past. The headphones support reliable Bluetooth 5.2, so you can enjoy fast and stable transmission. No more poor signal quality and delays! What's more, the GPods use special LAP antennas, which have made it possible to significantly increase the connection range. You no longer have to worry that when you move a little away from the phone, the transmission will be interrupted!

#### Long working time - fast charging

Listen to your favorite playlists for as long as you want. Fully charged GPods can play music for up to 5 hours if you don't use ANC noise reduction and backlighting, or up to 3 hours if you turn them on. In addition, the included case can extend that time to about 20 hours. The headphones also support fast charging - it only takes about 10 minutes for them to provide another 2 hours of use.

#### Made for your comfort

The headphones are extremely lightweight and comfortable - they fit perfectly in the ears and won't fall out of them. They are also distinguished by IPX4 water resistance. So you don't have to give up listening to music when you go for a workout or leave the house in the rain - drops of water or sweat are no threat to them! In addition, the GPods detect if you have them in your ears. Don't worry about missing your favorite part of a song or an interesting part of a podcast! You'll also find 4 pairs of interchangeable eartips (XS, S, M and L), so you can adjust the headphones to your needs and habits even better.

#### User-friendly

No longer do you have to reach for your smartphone every time to operate your headphones. GPods have built-in touchpads that you can use to conveniently pause and resume playback, answer a call, hang up, reject a call, switch a song, turn the backlight on or off, and select playback mode. Care for additional capabilities? Use the dedicated HHOGene app, which provides access to many interesting options.
