

Curtain Motor SwitchBot I Rail (white)

Curtain Motor SwitchBot I Rail (white)

Ref: 850007706098

Curtain Motor SwitchBot I Rail - Curtain I Rail (white)

Want an easy way to turn your ordinary curtains into smart curtains? The Curtain Motor SwitchBot I Rail system will help you do just that! All you have to do is attach it to the rail (I) and pair it with a dedicated app. Once you do that, you will gain the ability to remotely control your curtains using your smartphone. You also have the Touch & Go function at your disposal. You can also control the product with a SwitchBot Remote (not included) or a voice assistant (when paired with a separately available smart hub).

Smart curtains in just a few moments

Experience how little it takes to make your curtains smart. Simply add the Curtain Motor SwitchBot I Rail system to the app, then choose the type of your rail, the type of curtain (single or double) and the direction of exposure (in the case of single curtains). Then mount the device and calibrate it according to the instructions displayed on the smartphone screen. If you have double curtains, you will need 2 switches. You can also clip them together using the included clip.

Convenient control

Are you already lying in a comfortable bed, but forgot to close the windows? That's not a problem - if you're using the SwitchBot device, all you have to do is reach for your phone! Now you can conveniently control your curtains using the app. What's more, a small SwitchBot Remote is available for sale separately, which also allows you to control the system remotely.

Additional capabilities with the app

The SwitchBot app will not only allow you to cover and uncover your windows, but also provide convenient access to many interesting functions. With its help, you can, for example, set a work schedule (up to 5, and if you additionally have a hub, any number) and choose a mode - Performance or Silent, which provides a lower volume. It is also possible to set the system to pull the curtains with a delay.

Touch & Go function

Even once you've installed your SwitchBot system, you'll probably still reflexively try to close the windows manually. With such situations in mind, the Touch & Go function was created - when the device detects that you are pulling the curtain, it will automatically start pulling it for you. Let yourself be bailed out and enjoy more comfort in your home!

With the SwitchBot Hub Mini, you can do even more

Do you care about additional capabilities? Combine the Curtain Motor SwitchBot I Rail system with the SwitchBot Hub Mini (sold separately) and get convenient access to additional features! For example, you can now control the device with voice commands - it is compatible with Amazon Alexa and Google Assistant, and supports Siri Shortcuts. The product also works with IFTTT and SmartThings. It's also possible to automate its operation and connect it with other hardware from the SwitchBot ecosystem.

Long working time

Don't worry that the Curtain Motor SwitchBot I Rail system will refuse to serve you too quickly. The device is equipped with a long-lasting 3350mAh battery, so a fully charged one can serve you for up to 8 months. Its charging will take about 10 hours. It is also possible to power it with a dedicated solar panel (sold separately).
