Filter PGYTECH VND 2-5 stop for DJI Mavic 3 Classic (professional)

Ref: 6970801339354

PGYTECH VND 2-5 degree filter for DJI Mavic 3 Classic

If you are professionally involved in drones, the VND filter will definitely appeal to you. With its use, you can get perfect shots in different lighting conditions and excellent image quality. It will allow you to control the shutter speed, as well as properly reduce the amount of light entering the lens, which will make you get the perfect exposure and create extremely smooth videos with a cinematic effect. The VND filter is distinguished by working using the action of as many as four ND filters.

Fantastic photos on the go

The filter will work great if you want stunning shots on the road. A slight turn is all it takes to adjust it to the prevailing conditions, as it uses the operation of as many as four ND filters - 4/8/16/32. Don't let the opportunity to take a perfect shot pass you by because you need to find another filter.

Thoughtful design

The product is designed not to disturb the perfect balance of your drone. It is distinguished by its extreme lightness, which it owes to CNC aluminum, and yet it is extremely resistant to corrosion and scratches. What's more, the filter has been coated with an oleophobic and hydrophobic layer on both sides, so keeping it clean will not be a problem.

Excellent image quality

Responsible for the fantastic image quality is the professional Japanese AGC optical glass, which has been ground and polished many times to maintain a low refractive index, so you get perfect color reproduction in your photos.

Kit contents
