Dash camera Hikvision F6S 1600p/30fps

Hikvision F6S 1600p/30fps video recorder

Be prepared for any situation! The Hikvision F6S video recorder offers exceptional image quality at up to 1600p resolution, and all recorded footage can be easily played back using an app. A built-in Wi-Fi module is responsible for reliable connection, and what's more, it allows operation through simple voice commands (available only in English). In addition, it uses innovative ADAS technology, and when a collision is detected, it immediately saves the recordings. The device supports SD memory cards with a maximum capacity of up to 128GB.

Ref: 6942160417837

Automatic recording in the event of a collision

Never lose important recordings again. The special G-Sensor, if it detects a collision or violent shock, immediately starts recording and protects the footage by creating a backup. As a result, you can rest assured that all your key footage is safe. Parking mode is only available when connected with a power cable (not included).

Built-in Wi-Fi

Pairing your DVR is easier than you think. The device is equipped with a Wi-Fi module that ensures a stable connection. So you can directly connect to the video recorder via the app HikDashcam and watch live video on your phone!

Superb image quality

The device records footage in 1600p / 30 FPS quality, ensuring great image quality. This will give you clear and legible footage of the collision, and you can easily read the number plate of the car or recognise its model. The viewing angle of the lens is up to 130°, so you won't miss a thing. In addition, the device guarantees stunning recording quality even after dark thanks to the F1.6 aperture.

Increase your safety on the road

The innovative ADAS technology will help increase your safety when driving. It will notify you of the speed limit as well as green lights. But that's not all the advantages of the F6S! The device has a built-in microphone and a loudspeaker that accurately records sound, which can be particularly important, for example, when determining who is at fault in a traffic collision.

More possibilities with the app

Access all the features of the device by downloading the HikDashcam app. The app will allow you to conveniently playback recordings, change settings. You will also gain access to watch live video. What's more, you can also control the DVR with your voice - a simple voice command is enough to start or stop recording. Note: voice commands are only available in English.

Carefully thought-out design

The device stands out with its compact design, so you don't have to worry about it restricting your visibility while driving. The video recorder also features a 2-inch touchscreen that allows you to play back footage and supports live viewing. You won't have to worry about installing it either, and every time you start the car the DVR will automatically switch on.
