Body Camera SJCAM A50

Ref: 6972476162213

SJCAM A50 Personal Camera

Record unforgettable videos and take stunning photos with the SJCAM A50 multitasking personal camera. You can create high-definition video footage in 5 modes and great-quality photos in 3. The device also allows you to create footage at night, uses GPS and features IP65 water resistance.

Reliable night vision

The SJCAM A50 personal camera is equipped with LED and infrared lights, and the thermal field of view is as much as 135° - all so you can create high-quality footage after dark. What's more, the device is equipped with an automatic distortion correction system, so frames from night photos and videos can be even more detailed. Now you can create unforgettable shots of evening walks through the charming corners of the cities you visit.

Excellent image quality

Keep beautiful memories for a longer time and play them back whenever you feel like it! The SJCAM A50 captures video in 4K resolution with 30FPS smoothness, which means your recordings will be a vivid reflection of reality. What's more, the built-in microphone captures ambient sound, allowing you to capture unforgettable moments more accurately.

Experiment with modes

With the A50 personal camera, you can express yourself artistically or use it for more practical purposes. The device offers normal and time-lapse modes - they will allow you to create memorable shots and interesting effects. For everyday use, the car mode can come in handy, with which you can easily record any incident on the road. Worried about running out of space on the memory card? Don't be! The loop recording mode records short videos, and when the memory overflows, it replaces the oldest ones with new ones, so you can be sure that the camera won't stop recording at the least expected moment. An interesting feature is Pre-recorded. Its use makes the camera record a few seconds before the recording is turned on.

Built-in GPS

The SCJAM A50 uses a GPS module, making it great for use as a car DVR. Easily determine your geographical location, synchronize your route or determine your driving speed. What's more, thanks to the transmitter, the camera will inform you of the current date and time from the satellite.

Easy operation

The device is equipped with a 2-inch touchscreen, so you can easily select the options you're interested in and review the stored footage. In addition, you can use a dedicated app and freely manage the camera settings from your smartphone.

Robust design

The camera will not require you to charge it too often. A lithium-ion battery with a capacity of 2250 mAh is responsible for the long working time. In addition, the waterproof rating is IP68. What does this mean? The camera will work great in all weather conditions - don't let heavy rain limit you when you want to record breathtaking views!

Memory card

The camera is equipped with a micro SD card with a capacity of up to 128 GB. It will provide fast operation of the camera and instant data transfer. You won't have to wait indefinitely for your photos to load. You'll also find a USB-C cable included, with the help of which you can easily transfer videos and photos to your laptop or phone.
