

## Joyroom JR-ZS310 gravity dashboard car holder (grey)

Ref: 6956116721527

Joyroom JR-ZS310 gravity dashboard car holder (grey)

Joyroom JR-ZS310 gravity car cockpit mount (gray)

Do you use navigation while driving your car? Make sure you get the right mount for your phone and bet on the Joyroom JR-ZS310. The product is made of high-quality materials, and thanks to its well-thought-out design, it provides excellent stability for the captured device in any conditions. The mounting base is equipped with a sturdy suction cup, and the arm of the holder goes down, so it does not block visibility and does not interfere with the driver. What's more, the arm is movable and gives you the opportunity to adjust the position of the phone to your preference. The phone clasp was created in a triangular shape and is finished with non-slip silicone, so you can be sure that your smartphone will stay in place throughout use.

### Reliable stability

Your phone will be completely secure in the Joyroom mount. The JR-ZS310 holds your device between three arms that have been coated with non-slip silicone. What's more, they have been spaced out in a triangular shape, so you can be sure that your phone will stay in place even while off-roading. Noteworthy is the special detail of the lower arm - its design allows you to connect your phone to the charger, so you don't have to give up on navigation when your device gets low!

### Robust suction cup for mounting on the cockpit

Forget about poor-quality mounts that slide or fall off the mounting location. Joyroom's JR-ZS310 gravity car mount is equipped with a suction cup that uses nanoparticles, making it capable of supporting up to 2.5 kilograms. A special lever will make it easy for you to mount it anywhere, and lifting it will allow you to detach the holder without leaving any marks. The suction cup will work in all conditions - it can withstand temperatures in the range of -30°C - 90°C.

#### Movable arm

The Joyroom JR-ZS310 mount will significantly increase your comfort while driving with your navigation device. The product features a well-thought-out design, and the arm allows you to place your phone in the position that suits you best. You can adjust the height of the arm and change the position of the phone within 270°.
