

Polarized cycling glasses Rockbros 10135R (red)

Polarized cycling glasses Rockbros 10135R (red)

Ref: 5905316145399

Rockbros cycling glasses, polarised 10135R

Rockbros photochromic cycling glasses have been developed for active people. They are perfect not only for cycling, but also for running or climbing. They are extremely lightweight, comfortable and durable, and thanks to their intelligent lenses they can automatically darken or lighten depending on changing light conditions.

Designed for your comfort

The glasses are extremely lightweight - weighing only around 35g. They also do not exert uncomfortable pressure on the nose and temples. The 10135R also features an adjustable rubber nose pad and non-slip temples. These prevent the goggles from slipping off the face and provide even more comfort! What's more, the product guarantees UV400 protection - protecting against UVA and UVB rays.

Intelligent lenses

Thanks to the photochromic lenses, the Rockbros 10135R glasses are perfect for both sunny and cloudy weather. The product spontaneously brightens and darkens depending on the intensity of the light. This means that you will successfully use it in a variety of lighting conditions. Take the goggles on your next trip and enjoy more comfort!

Hassle-free transportation

These lightweight and comfortable glasses can accompany you almost anywhere. Their transport and storage is made easy with the included pouch. You will also find a practical zipped case in the packaging. Stow your spectacles in it and make them even easier to carry! The product is also very robust - don't worry about it being damaged during transport.
