

Electric Sonic Facial Cleansing Brush InFace MS2000 (pink)

Ref: 6971308400042

Electric Sonic Facial Cleansing Brush InFace MS2000 (pink)

InFace MS2000 sonic face brush (pink)

The inFace MS2000 sonic face cleansing brush will allow you to take care of your facial skin properly. It is made of silicone, which makes it durable and waterproof. Thanks to its gentle vibrations, it thoroughly cleanses your skin, additionally exfoliating dead skin. What's more, it works for up to 240 minutes on a single charge and allows you to adjust the speed on 3 levels.

Effective skin cleansing

The device works at a frequency of 4650 vibrations per minute, so it cleanses the face thoroughly and safely. In addition, the clever design of the brush makes it easier to clean pores and remove dirt. The silicone tabs at the bottom are extremely fine and will work well on the U-zone, i.e. larger areas, such as the cheeks. Use the medium-sized tabs to wash your entire face. The thicker ones, on the other hand, are designed for the T-zone and are effective in reducing sebum secretion.

Customize its performance to suit your needs

The inFace sonic brush offers a 3-stage speed adjustment, so you can choose the right level for you depending on your skin type. What's more, the device automatically shuts off after 90 seconds. In addition, the device works quietly, so its noise will not annoy you.

Superior build quality

FDA hypoallergenic and anti-bacterial silicone is used to make the inFace toothbrush. It prevents the deposition of microorganisms and contaminants while making it very easy to keep the device clean. In addition, the lightweight and compact design makes it easy to use and store - the brush resembles a bar soap in size. You can successfully stash it in your makeup bag and take it on vacation.

Water-resistant

The inFace sonic toothbrush is IPX7 water-resistant, so you can safely use it and wash it under running water. What's more, unlike other such products, the MS2000 was created from silicone, which makes it more resistant to damage - so it won't be intimidated by falls from 2 meters.

Long working time

Don't be afraid of frequent charging of the toothbrush. The product has a 400 mAh battery, which translates into about 240 minutes of continuous use. What's more, the kit comes with a cable that will make charging easy - just plug it into a mains charger, for example. In addition, the charging time is about 2.5 h.
