Dash camera UTOUR C2M 4K

Ref: 0735749192876

UTOUR C2M 4K video recorder

Stock up on the UTOUR C2M video recorder and drive safely. The device can record in 4K 2160p and offers several advanced driver assistance features (ADAS). It also allows uninterrupted monitoring for 24 hours - including while parking (when paired with a power adapter available for purchase separately). It also supports looping video recording and automatic emergency recording. In addition, you can purchase an additional rear camera.

Great image quality

Enjoy a wealth of detail. The video recorder supports 4K recording and offers 3840x2160 resolution. It is also distinguished by a wide 150° field of view and a SONY IMX415 Starlight Night Vision sensor, so it will also work great after dark. The F1.75 aperture, 7 layers of spherical glass lenses and 1 layer of infrared filter are also responsible for the excellent image quality.

Optional 1080p rear camera

Record images not only from the front, but also from the rear of the vehicle. This will give you useful evidence in case of a collision on the road or in a parking lot. The rear camera, available separately, supports 1080p resolution and provides a 135° field of view. It also offers an F2.0 aperture and rotates 360°. It is also very easy to install - just attach it to the rear window of the vehicle.

Driver support features

The C2M video recorder will help you drive more safely. The device offers a range of ADAS functions - it detects pedestrians and bicycles, for example, to then issue voice messages to warn you of collision risks. With its help, you will also avoid a collision with another vehicle. The product also recognizes the lane line - if you are close to crossing it, it will notify you immediately. A monitor is also available for separate sale to display current road conditions.

Even more conveniences

Customize the operation of the driver-assist function to suit your needs and experience - the C2M allows 4-stage sensitivity adjustment. The device is also equipped with an accelerometer - when it detects a collision, it will automatically start emergency recording and save the resulting video. This way you don't have to worry about losing important evidence! In addition, the camera supports the H.265 codec and allows looping video recording.

Proven solutions

The built-in processor with NPU is responsible for efficient and reliable operation of the video recorder. Don't worry about the device jamming in high temperatures! The C2M is also equipped with a GPS module, which records data such as speed and geographic coordinates in real time. This means that, if necessary, you will easily obtain information on the location of the accident, which may prove useful when claiming compensation.

24-hour recording

Stock up on a separately available power adapter to get uninterrupted video recording for up to 24 hours a day. While parked, the camera will record video in time-lapse mode (1FPS). This will easily save longer footage, taking up less space on the memory card. What's more, when a collision is detected, the device will automatically start emergency recording - the resulting video will allow you, for example, to determine the guilty party and claim compensation.

Smart control

Install the dedicated UTOUR Go app and get more options. With it, you can, for example, check the camera preview in real time, watch and download recordings, change settings and install OTA updates. The C2M video recorder supports 5 GHz Wi-Fi for a fast and stable connection. The device also supports voice command control - with just a few words, for example, you can take a picture or turn off audio recording! Note: voice commands are only available in English.

In the box

C2M camera
Power cable
Electrostatic sticker x2
Small crowbar
User manual
Brand
UTOUR
Model
C2M
Video codecs
H.265
Resolution
4K native (2160p)
Field of view
150°
Image sensor
SONY IMX415

Aperture
F1.75
Image algorithm
WDR
Compatible memory cards
TF Class10 cards with a capacity of 16-128 GB
Operating temperature
From -30°C to 75°C
Positioning system
GPS / GLONASS / Galileo
IMU
6-axis high precision gyroscope
C2M camera dimensions
110 x 35 x 50 mm
ADAS functions
Headway Monitoring Warning, Urban Forward Collision Warning, Stop & Go Warning, Lane Departure Warning, Pedestrian Collision Warning, Forward Collision Warning, 3D dynamic road condition display (only with monitor available for sale separately)
Front and rear recording
Yes, with rearview camera (sold separately)
Monitoring while parking (24 hours a day)
Yes, with power adapter (sold separately)
App
UTOUR Go
