Filter ND anamorphic Freewell z obiektywem szerokokątnym do DJI Mini 3 Pro

Ref: 6972971860355

Freewell anamorphic ND filter with wide angle lens for DJI Mini 3 Pro

The Freewell anamorphic ND filter with wide angle lens is a highly functional accessory kit that has been designed specifically for DJI Mini 3 Pro drone owners. The kit includes a number of filters, including an ND16 filter, ND32 filter, ND64 filter, ND128 filter and ND256 filter, which provide users with a wide range of exposure adjustments and help achieve excellent image quality in a variety of lighting conditions.

Cinematic effects

The anamorphic lens provides an expanded field of view and allows you to capture more detail in the frame. This allows you to enjoy even better image quality, discovering new details in the image that would normally be difficult to see. You'll also find a wide-angle lens included to capture an even wider angle of view, which is particularly useful when recording landscapes, cities or other open spaces.

Stunning images in a variety of conditions

The ND16 filter, ND32 filter, ND64 filter, ND128 filter and ND256 filter are useful filters that allow you to adjust the light entering the lens. The filters reduce the amount of light that reaches the sensor, allowing you to get the right exposure even in very bright lighting conditions. Freewell's ND filters are exceptionally easy to use and you won't find them challenging to install.
