

Access to the most important information

Another advantage of the Avatto WT200 is its LCD display. From it, you will learn about the set operation mode, network connection, set temperature or safety lock on. What's more, the thermostat displays the current time. This puts all the most important information at your fingertips - just a glance away! You can also adjust the brightness of the screen or turn it off completely.

Additional features

The Avatto WT200 smart thermostat is equipped with a special child lock that prevents you from using the device. This will prevent you from turning on/off an unwanted function. In addition, it is possible to combine several WT200s into groups, for even greater control. You can also grant access to the device to other household members so that each of you can control it.
