Deerma F327W - Humidifier for special tasks

The state-of-the-art Derma F327W humidifier with sterilization function is an ideal solution for allergy sufferers. Stylish design combined with functionality works well in any situation.

The power of UV rays

The modern solution of water sterilization using a UV lamp will work well in any home, especially for people with allergies. A special 360° system allows you to thoroughly purify the water in the tank, resulting in unimaginably fresh and clean steam. The effectiveness of this method is 99% annihilated bacteria and other microorganisms. The entire process takes place inside the device and is invisible, making it completely safe for sight.

Long-lasting performance

The powerful 5 L water tank gives the device the ability to run for up to 14 hours without refilling. Such a solution allows you to maintain constant humidity both day and night.

Modern design

The humidifier was designed with joint-reducing technology to avoid leaks or mechanical damage. In addition, the stylish, rounded shape

of the transparent tank combined with the black base will fit into any space. The Deerma D327W can also become more personal with the ability to add decorations to the water tank. Equipped with a hygrometer, it informs you of the current hydration level via a display.

Carbon filtration

Using a carbon filter with 3D hole technology, the highest level of cleanliness maintenance has been achieved. The filtration stops any dust, hair or other particles that can cause contamination of the water in the tank.

Three power levels

The device is equipped with three levels of steam output. The first is used for prolonged but slow humidification. The second can be used for keeping humidity at a constant level, but on a larger scale. The third level gives a sizable and extensive steam ejection, useful for quickly raising the humidity. Depending on the condition of the air and the selected operation time, the device will select the appropriate mode itself, giving 45% to 90% humidification of the air.

Moisturizing mist

A special system to break up water molecules results in a fine mist coming out of the device, without large water droplets. These micro particles not only moisturize the air, but also penetrate deep into the skin, leaving it smooth and tight.

For use at night

Quiet operation mode (20-40 dB0, run time settings, display fade-out and the ability to turn the blue light on or off give you the ideal conditions for using the humidifier at night as well.

Working time settings

The ability to set the operating time gives convenience in use. The device can run for 2,4,8 or 10h continuously, depending on your needs. It is also possible to run the humidifier without a specific time interval, however, a special safety feature will turn off the device after 12h to avoid operating without water in the tank.

Aromatherapy

It is possible to add your favorite fragrance oils to the device to fill the room with aroma in addition to humidification. In this way, you can perform aromatherapy, which has a positive effect on your mood.
