

Filter VND 6-9 stop PGYTECH for DJI Mavic Air 2 (P-16A-041)

Filter VND 6-9 stop PGYTECH for DJI Mavic Air 2 (P-16A-041)

Ref: 6970801336315

Perfect lighting in any situation

With the VND 6-9 stop filter, you can adjust the amount of light reaching your camera much faster. The intention of the manufacturer was to create an accessory that is better suited for dynamic work than standard ND filters. The range of the VND 6-9 stop filter, is between ND64-ND512.

Available in two versions

For even more precise control of the amount of light entering the camera, PGYTECH has created two filters: 2-5 and 6-9 stop. This gives the user 4 ND filters in one, providing a far more convenient user experience.

Ideal for demanding work

With the 6-9 stop VND filter, you no longer need to worry about changing between ND64 or ND512. Just turn the dial and get the desired effect. Thanks to the applied perforations, your fingers will not slip on its surface and removing the accessory is no problem at all.

Advanced protective coatings

Thanks to the double-sided, multilayer, water- and oil-repellent coating of the filter, keeping it clean is much easier. The manufacturer has also equipped it with a hard coating to make it scratch resistant. The filter also uses SCHOTT glass as its base material. By

repeatedly grinding and polishing for a low refractive index, it allows professionals to create detailed images with beautiful, saturated colors.

Instructions for use

First remove the mounted lens cover, then attach the PGYTECH filter to the lens by pressing it down properly and rotating it to lock it in place. Then spin the accessory dial to adjust the desired dimming value.

VND (2-5 stops): Choose from 4 equivalents i.e. ND4, ND8, ND16 and ND32

VND (6-9 stops): can be selected from 4 equivalents i.e. ND64□ND128, ND256 and ND512
