Face Mask AirPOP Light SE (Black)

To give you the best possible protection, we've reinvented the entire filtration. We designed the mask from the ground up, focusing on efficiency, comfort and ease of breathing. What we've achieved is a breath of fresh air.

Easy fit

For a perfect fit, the seal is designed with an articulated top layer. Simply unfold the mask to fit a larger size and create a flexible seal around the critical area of the bridge of the nose. No longer do you have to worry about an ill-fitting, uncomfortable mask - with AirPop, that problem disappears in an instant!

Four-layer protection

The two-layer electrostatic melt-blown nonwoven filters feature high filtration efficiency and protect against even the finest contaminants. The pre-filter layer is sandwiched between two protective top layers, effectively trapping harmful particles found in the air. The filter blocks as much as >97%
