

Ultrasonic air humidifier Deerma F323W

Ultrasonic air humidifier Deerma F323W

Ref: 6955578036620

Deerma F323W ultrasonic humidifier

Deerma F323W humidifier will allow you to take care of the optimal level of humidity in your home, and thus your health. The capacity of its water tank is 5 l, which ensures a long working time of the device. Attention is also drawn to the perfectly thought-out design of the product, which not only stands out for its stylish character, but also guarantees safety of use and simplicity of operation.

Optimum level of humidification

The volume of mist distributed by the device is up to 300 ml/h. This is an optimal value that will be perfect for your home. It is large enough to perfectly humidify the air in the selected room, but at the same time small enough not to contribute to the formation of dampness on walls and furniture. It also does not create unpleasant and harmful moisture. You can adjust the level of humidification with the F323W dial.

Designed to impress with excellent performance

What makes the humidifier emit a water mist of such perfect volume? Its carefully considered design! The device is equipped with an umbrella-shaped outlet. It has 8 slots through which steam is evenly distributed. The humidifier sprays water molecules with a size of just a few micrometers, which helps prevent stains on furniture or walls.

Works even throughout the day

One of the biggest advantages of the humidifier is its 5-liter water tank. It allows you to enjoy an impressively long operating time. Once you fill it up and start the device, it can humidify the air in your home even all day - from morning to night. Cumbersome refilling of water even a dozen times a day will not be your problem - Deerma F323W is unparalleled performance and convenience!

Enjoy exceptional simplicity of operation

The operation of the device is fabulously simple - you will easily cope with it. All you have to do is disconnect the tank and fill it with water, then put it back in the right place. Once you've done this, simply turn the humidifier's knob to start spraying the water mist. In turn, when the tank runs out of water, the device will be turned off automatically - no need to worry about damaging it!

Stylish design - no leaks

The humidifier looks really great. Its modern, minimalist design makes it perfect for any room and will perfectly complement its arrangement. What's more, the ultrasonic welding technology used in the manufacturing process of the device allowed to optimally combine the base of the F323W with its water tank. As a result, you can use the humidifier without worrying about any leaks.
