DDPAI Mini Pro Video Recorder

Feel safer on the road and capture shots of your travels with the DDPAI video recorder. The Mini Pro features a 1/2.9" CMOS image sensor and a 140° wide-angle lens. The device also guarantees 2305x1296 resolution, resulting in clear and detailed recordings, and from different perspectives. Despite its compact size, it supports a number of advanced features, such as loop recording, emergency locking in case of a collision, as well as 24/7 parking lot monitoring (with power adapter available for sale separately). A high-quality capacitor is responsible for reliable operation. In addition, the night vision device allows recording in low-light conditions. A dedicated application allows convenient access to the recorded material.

Reliable recording on the go

With UHD 1296P resolution, the DDPAI Mini Pro will let you see every detail on the road. The video recorder features an advanced 1/2.9" CMOS image sensor and a 140° wide-angle lens. You don't have to worry about unfavorable lighting conditions - night vision combined with HD optical lenses and F2.0 aperture will allow you to get clear recordings even in the dark. In addition, the lens rotates 330°, allowing you to record both the interior of your car and the landscapes outside your window.

Emergency lock function

In the event of an emergency, the emergency lock function (emergency lock) makes it easy to collect evidence. When the built-in gravity

sensor detects sudden braking caused by a collision, the video recorder automatically takes photos and video, and stores them in a separate space to prevent them from being overwritten by everyday recordings. A 3-axis gyro sensor additionally enables precise detection of vehicle movement, ensuring even greater accuracy of recorded information.

Loop recording

Don't waste time manually deleting old recordings. With its loop recording function, the DDPAI Mini Pro ensures continuous and stable recording of footage. When the SD memory card reaches full capacity, the video recorder automatically overwrites the oldest recordings, ensuring that you always have room to record the latest and most important driving moments. Focus on the road while the device takes care of efficient storage space management on its own.

Sentry mode

When parked, the DDPAI Mini Pro automatically activates Sentry mode and starts recording if any collision is detected. Even when you're not near the vehicle, the video recorder will stay alert and record potential incidents. This way you will enjoy full control over the safety of your vehicle, both while driving and while stationary. Note: you will need to purchase a DDPAI power adapter (available for purchase separately) to use this feature.

Discretion thanks to compact design

The dimensions of the video recorder are just 32 x 87 mm, so it can be mounted unobtrusively without interfering with the field of view while driving. The use of an integrated mount and USB port makes the whole thing look aesthetically pleasing, perfectly harmonizing with the interior of the vehicle. Now you can enjoy full protection and record without interference!

High-performance capacitor

The super capacitor of the video recorder guarantees safe and reliable use. Thanks to it, the device is resistant to extreme temperatures - both high and low. The product is distinguished by a longer service life, which reduces the negative impact on the environment. In addition, it significantly minimizes the risks associated with overheating of the device, thus providing additional safety.

More possibilities with the app

Gain the ability to conveniently edit and share recordings with a single click by downloading the DDPAI app. From it, you can use functions such as live preview, playback and download of recordings, as well as do post-production. In addition, you will be able to share your photos and videos with others. Built-in Wi-Fi allows you to download and watch videos at any time.

Included:

DDPAI Mini Pro video recorder

Mounting tool

Power cable

Car charger

3M sticker

Electrostatic stickers

User manual

Manufacturer

DDPAI

Model

Mini Pro

Resolution

2304x1296p

Lens

5 sets of 140° HD optical lenses, F2.0 aperture

Storage

MicroSD card up to 128G (above class 10)

Sensor

Built-in 3-axis gyro sensor

Wi-Fi

2.4 GHz

Dimensions

32 x 87 mm

Price:

€ 55.50
