

## Set of 2 filters Freewell Gradient for DJI Air 3

Ref: 6972971864087

Set of 2 filters Freewell Gradient for DJI Air 3

Set of 2 filters Freewell Gradient for DJI Air 3

The set of 2 GND Freewell filters is a perfect solution for DJI Air 3 drone owners who want to achieve better quality photos and videos in varying lighting conditions. The set includes two GND (Graduated Neutral Density) filters - GND0.9 filter and GND1.2 filter, which allow adjusting the exposure depending on the level of lighting in different parts of the frame. The set also includes a special case that allows safe storage of the filters and protects them from mechanical damage.

Perfect shots in various conditions

The GND0.9 filter reduces the amount of light entering half of the frame, which allows achieving a more balanced exposure when the sky is bright, and the ground is dark. Meanwhile, the GND1.2 filter reduces the amount of light on two-thirds of the frame, which is ideal for taking pictures in extreme lighting conditions, where the difference in brightness between the sky and the ground is very significant.

High-quality workmanship

The filters are made of high-grade optical glass, characterized by incredible resistance to scratches, dust, and oily stains. This way, you can be sure to keep them in excellent condition for a long time! Mounting them will not be a problem for you. You also don't have to worry that they will disrupt the drone's operation! The set also includes a case that allows for the safe storage of filters and protects them from damage.

Included in the set  
filters (GND0.9, GND1.2)

case

Manufacturer

Freewell

Model

FW-A3-GND

Compatibility

DJI Air 3
