HiFuture Future Tour Wireless Headphones (black)

Discover the sound of the future with HiFuture wireless headphones. Future Tour will let you indulge in your music with hybrid ANC noise cancellation. They are delightfully comfortable and have a runtime of up to 40 hours. If that's not enough, you can confidently use the audio cable you'll find in the set and enjoy your music without limits.

Get away from the noise

Relax while listening to music and forget about everything else. The headphones support active noise cancellation, so they effectively separate you from the noise. They constantly monitor the level of ambient noise and eliminate it with an opposite signal. So you can focus on what you're listening to and finally indulge yourself.

Impressive runtime

No matter how long you leave the house for - your favorite tunes can accompany you at all times. The sturdy battery provides up to 40 hours of playback without charging interruptions. Equipped with a USB-C port, Future Tour supports fast charging, so just a few moments are all it takes to get it ready for more hours of use.

Robust wireless connection

Instant Bluetooth 5.2 connectivity and low latency will give you a seamless experience with connected devices. If you play games or watch movies, you'll appreciate the low latency that lets you enjoy perfect audio and video synchronization. This is important, especially when one second can decide your victory!

Wired support

Although the headphones are wireless, they support connection via an audio cable, which is included in the set. This is a great solution when the headphones are running out of power and you have no way to refill them. You don't have to stop listening in the middle of the action of an audiobook or a new episode of a podcast. Just connect them to the audio source with the cable and continue your entertainment.

Phone calls without interference

Attending webinars or playing online games? Now you can talk freely and not worry about interference. High-quality microphones with advanced noise cancellation eliminate background noise. This ensures that your voice can be heard by others in HD quality, and you don't have to repeat yourself.

Delightfully comfortable

Now even long hours of gaming sessions or listening to a long audiobook will not cause discomfort. The headphones offer earcups made of exceptionally soft foam. They adapt to the shape of your ears and do not cause unpleasant pressure, so you can use them for a long time without any problems.

Balanced HD sound

Sound is what counts in headphones, and Future Tour is a guarantee of fantastic sound. They provide faithful signal reproduction, so you can fully immerse yourself in your favorite game or the music you're listening to and enjoy the surround sound of the soundtrack.

Foldable, waterproof design

The HiFuture Future Tour headphones are the perfect companion for any of your trips. The foldable design makes them easy to fit in your carry-on luggage when you're not using them. What's more, the headphones are IPX5 waterproof certified and won't be intimidated by light splashes or contact with rain.
