

Smart food dispenser CatLink F04 STD

Smart food dispenser CatLink F04 STD

Ref: 6972884750941

CatLink F04 STD smart food dispenser

Let Catlink support you in taking care of your pet. The F04 STD Intelligent Food Dispenser guarantees a consistent supply of food thanks to its anti-clog design. It offers offline food dispensing, sealing technology and monitoring of your pet's health data with the help of an app. It's also possible to create a feeding schedule tailored to the needs of a cat or small dog. Maintenance of the device will not be a hassle and you can power it in 2 ways. The capacity of the food tank is as much as 4 liters.

Reliable assistant in feeding

Be sure that your pet is not hungry while you are away. The Catlink dispenser monitors the bowl and automatically refills the food when the amount drops below 10 grams. With the ability to set feeding times and the number of servings, you can customize your pet's diet. The 4-liter capacity allows you to accommodate up to 2 kg of food, which is enough to provide an adult cat with meals for 20 days. This allows you to go out of town without worries.

Two ways to power up

Catlink makes sure to provide your beloved pet with meals in any situation - including during power outages or internet connection problems. The dispenser supports Offline mode, in which it guarantees the supply of food, but does not save feeding data. You can power the device with 4 AA alkaline batteries (to be purchased separately), among others.

Monitor your pet's diet with the app

The app provides access to detailed information on how your pet's diet is going. An infrasound sensor accurately detects an approaching cat, while a gravity sensor records every gram of food consumed. An advanced algorithm monitors and analyzes your pet's health 24/7, and alerts you to detected abnormalities. The app also provides low-food alerts and informs you when food is blocked. From it, you will set up a feeding schedule, choose the times at which food is to be served, and set the number of servings. You can also set up a child lock function to eliminate the risk of accidentally starting the dispenser. The device supports OTA updates - so you will always benefit from the latest features.

Refined and thoughtful design

Opt for a dispenser that keeps food fresh. The silicone seals that the F04 STD is equipped with guarantee insulation from air and moisture, preventing mold. The automatic closing of the extraction opening protects against insects, and the built-in container with desiccant is responsible for the freshness of each serving. You also don't have to worry about the risk of food jams and blockages, the size of which does not exceed 16 mm. In addition, the bowl is made of pet-safe materials, and the tilt at an angle of 7° makes it easier for your pet to eat. Disassembly and cleaning of the device are done efficiently and effortlessly, and the cable is bite-proof.
