Landing gear Sunnylife for DJI Air 3 - Orange (A3-LG664-C)

Sunnylife landing gear lift for DJI Air 3 (orange, A3-LG664-C)

The Sunnylife Landing Gear Elevator is a key accessory for the DJI Air 3 that effectively increases the ground clearance by 36mm, providing protection for the drone's sensors and components. Its foldable "Cool Spider" style design not only adds visual appeal to the device, but also ensures the integrity of the navigation and sensor systems. The accessory allows stable landings on any type of terrain.

Effective lift of 36 mm

The 36mm increase in the distance between the drone and the ground ensures that both the device and its sensors remain in perfect condition. Takeoffs and landings will be trouble-free - you no longer have to worry about damage caused by uneven terrain.

Foldable design

The foldable design of the undercarriage with a precise ratchet mechanism increases the convenience of use. Folding and unfolding the accessory is quick and hassle-free, which makes transporting and storing the drone much easier. An additional advantage is the light weight (26g).

Hassle-free installation

The landing gear upgrade is designed to make installation a breeze and won't interfere with your drone's vision system, sensors and

lighting. This ensures that your device remains fully functional and you can enjoy a smooth flight.

Unique design

Enhance the uniqueness of your DJI Air 3. The Sunnlylife landing gear boost features an original and eye-catching design that will make your drone more recognizable during flight.
