IPL Hair Removal InFace ZH-01F (white)

Ref: 6971308401001

inFace ZH-01F IPL hair removal (white)

Experience an innovative approach to smooth skin with inFace. The inFace ZH-01F IPL Laser Depilator uses intense pulsed light (530-1200nm) with up to 12J of energy, reaching the roots of hair and effectively getting rid of stubborn hair. It offers as many as 999999 flashes, providing unlimited possibilities in your quest for perfectly smooth skin. You don't have to worry about pain and irritation - the device guarantees a comfortable experience, and the treatment is quick and painless. With 2 modes and 5 power levels, you can customize its performance to suit your needs. Choose ZH-01F and enjoy the possibility of professional hair removal in the comfort of your home!

Advanced technology for smooth skin

The inFace IPL laser epilator uses an effective wavelength range of 530 to 1200nm, which allows it to precisely reach the deep layers of hair follicles. Short wavelengths of light have limited penetration ability, but the ZH-01F overcomes this barrier, effectively reaching various depths - 560nm for the epidermis, 630nm for light and medium hairs, and 1200nm for the deepest nested ones. With energy reaching 21J, melanin in the hair follicles is removed, guaranteeing not just superficial results, but deep epilation. You can be sure that every hair will be permanently removed.

Visible results after just 2 weeks

With inFace you will learn the secret of effective depilation. Depilator ZH-01F will meet the expectations of those whose traditional methods of hair removal fail. Forget about unsatisfactory results or allergic reactions and defeat the problem of unwanted hair at the very source - the root. After just 2 weeks of regular use of the device, you will notice a slowdown in hair growth. On the other hand, after 4 weeks, the hair will become thinner and its dark roots will be eliminated, leaving your skin exceptionally smooth. By continuing the treatment for a period of 4 to 8 weeks, you will experience a natural narrowing of pores and a halt in hair growth. Discover a new dimension of depilation and enjoy the effect of smooth skin!

Convenience during the treatment

The inFace IPL epilator offers 2 modes (Manual and Automatic) and 5 power levels, allowing you to customize your treatment for different body parts. The innovative automatic continuous flash function provides convenience and speeds up the epilation process. You don't need to trigger the light with a button - just apply the device to the skin. Model ZH-01F is designed for long-term use, so it provides as many as 999999 flashes.

Ease of use

Using the epilator will not cause you any difficulties. After starting it with the dedicated button, you can choose the power level (it is recommended to use the lowest intensity level during the first treatment). Then put on the included protective goggles and move the epilator over the areas from which you want to eliminate hair. With InFace ZH-01F, you can enjoy comfort and efficiency at the same time!

Refined, ergonomic design

The weight of the InFace ZH-01F epilator does not exceed 205 g, and its dimensions are only 131 x 97.5 x 35.6 mm, so it is handy and will fit into any travel bag. The optical filter it contains effectively eliminates harmful UV rays, guaranteeing safe use and protecting the skin. The device emits light every 0.7 seconds, which, combined with its large emission area (3.3 cm²), ensures even and effective epilation.

Included:

IPL inFace ZH-01F laser epilator x1

Power adapter x1

Protective goggles x1
