

Gyroscope for RC Car Models SkyRC Gyro GC301

Ref: 6930460007421

Gyroscope for RC Car Models SkyRC Gyro GC301

Gyroscope For RC Car Models SkyRC Gyro GC301

SkyRC GC301-Gyro is dedicated for RC cars. The device uses a gyro sensor and a special algorithm to adjust the position of the wheels for even better stability and handling characteristics. The GC301 makes the model even more maneuverable and easier to control. It is also extremely lightweight and small, so it can be used on models of any scale without worrying that it will prove too heavy or significantly increase the weight of the model.

Key features

Adjustable steering for even better control. With this solution, cornering is possible at even higher speeds, and the model itself is even more stable while driving. Remote control allows you to adjust the power via a 3-channel transmitter or via a trimmer on the unit.

Opis elementów GC301

Manufacturer

SkyRC

Model

SK-600142-01

Operating voltage

4 - 8.4 V

Current consumption

25 mA

Operating temperature range

from -10°C to +45°C

Weight

3.6 g

Price:

€ 17.99
