

Wireless Gaming Controller with smartphone holder PXN-P30 PR

Wireless Gaming Controller with smartphone holder PXN-P30 PRO (Green)

Ref: 6948052901323

PXN-P30 PRO Wireless Controller with Phone Holder

Turn your smartphone into a portable console from PXN in just a few moments. The clever design allows you to extend the grip of the gamepad up to 16 cm, accommodating most models of mobile phones as well as tablets. It connects wirelessly via Bluetooth 5.0, minimizing delays. 2 analogs and two groups of buttons, reproduce the number of keys and capabilities of the console, and a capacious battery is responsible for the length of the game. The device is compatible with Android (also in HID mode) and iOS and is MFI certified.

Three-stage size adjustment

The controller can be easily adjusted to the size of your mobile device. In the basic setting it can hold a device with a screen diagonal width of 10 cm (4 inches). In the maximum position you can place a phone or tablet with a diagonal of up to 16 cm (6.67 inches) in the gamepad. A strong lock prevents the phone from accidentally slipping out of the gamepad.

Powerful performance

Thanks to its powerful 250 mAh battery, the gamepad is ready for hours of gaming, and its low power consumption means it can remain in standby mode for many hours. Power can be restored with the included micro USB cable.

iOS compatibility

The PXN-P30 PRO is fully compatible with iOS, so it connects to dedicated games without any additional settings. So you'll gain control during multiple duels in Call of Duty or Fortnite, or build your base in Minecraft without interference.

Works with Android

Pair the gamepad with your Android phone and seamlessly establish a wireless Bluetooth 5.0 connection to start playing as soon as possible. With support from the PXN Play app, you can freely program the Gamepad's keys to make the controls even more precise and tailored to you and your game.

E-Sport micro switch triggers

Each of the buttons has been equipped with micro switch triggers that ensure key life for millions of clicks. The reduced distance between the button and the sensor makes the response to your clicks even faster, for an even better gaming experience.
