TELESIN 2nd gen 1,2 meter tube carbon selfie stick GP-MNP-002

Telesin carbon fiber selfie-stick for sports cameras 1.2m (GP-MNP-002)

Create even better selfies or group photos. The Telesin GP-MNP-002 carbon fiber selfie stick will help you do that! The accessory unfolds to a maximum length of 120cm, and thanks to its sturdy construction it does not wobble and can easily handle a load of up to 0.3kg. The product is compatible with most popular models of sports cameras and smartphones.

Create your best selfie

Capture most of the landscape in a photo or sweep your entire group of friends into the frame. The Telesin selfie stick will give you a wider angle of view and allow you to get stunning results. The accessory allows 5-position length adjustment from 32-120cm, making it perfect for most scenarios. What's more, when folded, it's compact enough to keep on hand at all times!

Even more interesting effects

Do you want to surprise your friends with an original video? Do you care about getting the most interesting results? Now it's possible - if you use a 360° camera, you can make the selfie stick not visible in the finished shot. Experiment, have fun and create amazing footage from unusual perspectives!

Lightweight and durable design

Bet on the highest quality workmanship. The selfie stick was created from high-grade carbon fiber, which means it is extremely durable, yet lightweight. It also stands out for its high resistance to corrosion, which allows you to use it on the water and beyond without worry. What's more, it won't wobble when unfolded, making your shots stable. The accessory will also not deform - even after prolonged use.

Additional amenities

The handle of the selfie stick is covered with silicone that is pleasant to the touch. As a result, it does not slip in your hand and provides greater comfort. On the bottom of the accessory you will also find a 1/4" hole, which allows you, for example, to attach it to a tripod (sold separately). You can also lock the selfie stick at the desired length - this way you can avoid accidentally folding or unfolding it.

Wide compatibility

Do you use a GoPro on a daily basis? Or do you prefer to record with your phone? The Telesin selfie stick will work great in almost any situation - it is compatible with most models of sports and 360° cameras, and also fits smartphone mounts. It is equipped with a special adapter and 1/4" thread, so you can successfully attach it to the device of your choice.
