

TELESIN Filter set CPL/ND8/ND16/ND32 for DJI Action 3 / 4

Ref: 6974944460746

TELESIN Filter set CPL/ND8/ND16/ND32 for DJI Action 3

TELESIN Filter set CPL/ND8/ND16/ND32 for DJI Action 4/ 3

Create even more stunning shots with your DJI Osmo Action 4/3 camera. In the package you will find 4 filters - CPL, ND8, ND16, ND32, which will allow you to get stunning results. The accessories are very easy to install, and use high-quality Schott AG glass and lightweight aluminum alloy.

Top quality workmanship

The frames of the filters were created from high-grade aluminum alloy, which made it possible to significantly reduce their weight and extend their life. Schott AG optical glass was also used for the accessories, which is distinguished by an optimal refractive index and ensures faithful color reproduction. Its surface was additionally coated with a special protective layer.

Hassle-free installation

The installation of the filters will not cause you any problem - it only takes a moment! This allows you to quickly change accessories if necessary. You will no longer miss the opportunity to create a unique shot! What's more, each filter is equipped with a silicone cover that protects the camera lens from scratches.

Fantastic image quality

The included CPL filter eliminates polarized light, making the water in your photos more transparent and the sky more blue. This is perfect if you intend to photograph landscapes! And the ND filters (8/16/32) reduce exposure and increase shutter speed, which is ideal for filming empty streets, clouds or waterfalls, for example.

In the box
